## **FINAL YEAR PROJECT**

Smart Interviewer is being developed with the mission of making the interview process transparent, effective and human error free. Its solution is being developed in deep learning and image processing realms.

It is cross platform application intended to be used with computers, mobile phones or even tablet.

The project could be defined by the scenario as getting ready to be give an interview for a job, and all one have to do is open an application on his/her computer, tablet or even his/her phone.

The application would display questions with timers being set and displayed and as one answers a question, moves on to the another questions and the score would be calculated and displayed at real time.

Once he/she completes the interview process , the results and the video being recorded would be sent to that particular organization, where they can go through the video and respond to the applicant with ease.

The scores would be system generated, therefore the interviewee and the organization that he or she is applying for would know the results beforehand.
